Educational Background

Beijing University of Posts and Telecommunications - Computer Science and Technology **2019.09 - 2022.07**

Excellent academic performance, GPA 3.8/4.0。 Received xx awards in x and xxxx competitions, including 1 first prize in xxxxxxx multimedia competition.
Hosted and participated in xx provincial and national level projects; Published xxx papers, including x indexed by EI.

Xinxiang University - Computer Science and Technology **2015.09 - 2019.07**

Excellent academic performance, GPA 3.9/4.0。 Received two national scholarships and was awarded the title of "Three Good Students" multiple times.

Internship experience

Muji Technology Co., Ltd. - Technical Engineering Platform Group - Java Development Internship Engineer **2021.06 - 2021.12**

- Responsible for the development, reconstruction, and maintenance of services related to wood and xx business, as well as the synchronization of online product side services.
- Analysis of daily xxx business and design of solutions.
- Responsible for the architecture and development of the backend of the wooden and internal SSO single sign on system.

project

E-commerce shopping system

SSM MySQL Redis Nginx Mycat

- Project Description：
- **It is a complete e-commerce shopping system. The main function is xxxx, responsible for server architecture and backend development. The main function is xxxx, responsible for server architecture and backend development.** ：
  - Job responsibilities
  - Redis caching is used to query product details pages, which increases the concurrency of a large number of accesses and improves the response speed of web pages by 50%.
  - Improve the speed of user requests for flash sale product lists by using Redis (increase QPS from 180 to 1200)
  - Develop based on Maven and utilize its inheritance feature to manage dependencies of shared JAR packages. Utilize its aggregation feature to split the backend management system and achieve hierarchical engineering development.
  - RabbitMQ is used to solve communication problems between different systems and to address the tight coupling issue caused by the application of FHIR.

Using Nginx as a reverse proxy and building a Tomcat server cluster to solve the high concurrency problem of front-end web pages

- skillJava Basics
- Familiar with Java fundamentals, proficient in multi-threaded concurrency, and familiar with JVM principles. database
- Proficient in using MySQL, Redis, and common optimization methods. framework
- Familiar with mainstream development frameworks such as Spring Boot and MyBatis, familiar with the use and principles of message queues Kafka and Zookeeper. distributed
- Understand the design and application of distributed systems, and be familiar with common CAP and Paxos algorithms. tool
